

PRE-TREATMENT PUBLIC NOTICE for PLEASANT LAKE

This notice is being mailed at least 7 and not more than 45 days prior to the first herbicide application on the lake. Please take the time to read this notice; it is for your information and safety!

The Washtenaw County Board of Public Works, through a legally established special assessment district, plans to have the lake treated for control of nuisance and invasive aquatic plants and algae. This notice is being distributed at least 7 days in advance of the initial treatment in accordance with the Michigan Department of Environment, Great Lakes, and Energy (EGLE)– Aquatic Nuisance Control (ANC) permit requirements. **This will be the only notification you will receive in the mail related to the 2022 herbicide treatment.**

A permit for the treatment will be issued by EGLE-ANC before any herbicide treatments take place. The herbicides will be applied by wands, surface booms, and/or subsurface injection lines. Each lake is treated according to treatment plans prepared by the Lake Scientist and approved by the Washtenaw County Public Works office. Prior to treatment, an 8.5” x 11” brightly colored sign will be placed along your shoreline. The signs will provide information, including the date of the treatment, the herbicides used, and the water use restrictions following treatment.

We will use only herbicides that are approved for use by the United State Environmental Protection Agency, Michigan Department of Agriculture and Rural Development, and the Michigan Department of Environment, Great Lakes and Energy – Aquatic Nuisance Control permit. If multiple herbicides are applied, the more restrictive water use restriction will be communicated. These waters use restrictions are designed to allow the safe use and application of these herbicides. If you have any questions, please contact:
