| Project Name (location where the work is done) Sharon Mills, Sharon Township, Manchester, Washtenaw County, MI | | |
| BID OPENING (date and time as arranged with the Issuing Officer after project approval) | DATE September 23, 2011 | TIME (local time) 2:30 p.m. |
| <p>Summary of Bidder's Questions:</p> <p><u>Q1:</u> What type of finish will be required for the structural steel?</p> <p><u>Answer:</u> All structural steel provided shall be hot-dipped galvanized. All damaged galvanized surfaces shall be repaired by the contractor according to Section 716.03 E of the MDOT 2003 Standard Specifications for Construction. The 3-coat paint system specified in the note on sheet 2 of the plan set shall not be considered for bidding.</p> <p><u>Q2:</u> How much of the existing superstructure above the beams will need to be replaced?</p> <p><u>Answer:</u> At this time there is no specific timber superstructure components called out to be replaced. Based on the contractors method and following a review of the timber during removal and/or dismantling the engineer shall determine specific components, if any, to be replaced. Contractors should bid the contract based on the details shown in the drawings.</p> <p><u>Q3:</u> Will the approach timber at each end of the bridge be salvaged and reused?</p> <p><u>Answer:</u> Yes. We anticipate dismantling and reuse of the existing timber decking.</p> <p><u>Q4:</u> Can the structural steel beams be shop spliced?</p> <p><u>Answer:</u> Yes. The number of splices per beam shall be limited to one (1). Shop drawings are required to be provided prior to fabrication. The splice must be a full penetration weld in accordance with the latest edition of the AWS weld specifications. All details including the splice location shall be provided in the shop drawings. All welding must be performed by certified welders recognized by MDOT in accordance with MDOT's 2003 Standard Specifications for Construction.</p> | | |
